

Marketing Research Project (Group 14)

Project Idea:

The study focuses on **Customer Satisfaction and Churn Analysis in OTT Platforms** such as Netflix, Disney+ Hotstar, and Amazon Prime. With intense competition in the streaming industry, subscription cancellations (churn) have emerged as a critical business challenge. The core problem is to understand which factors—such as content variety, pricing, user interface, streaming quality, and recommendations—most strongly influence customer satisfaction and lead to churn. By collecting primary survey data from OTT users and analyzing it with appropriate marketing research methods, the project aims to identify the key drivers of loyalty and provide actionable insights for reducing churn and enhancing customer retention.

Group Members:

1. **Nanda Krishnan V**, *Cybersecurity*
2. **Adheena M**, *Cybersecurity*
3. **Alina N A**, *Data Analytics*
4. **Manikandan M**, *Data Analytics*
5. **Tony Thomas**, *Data Analytics*
